

Instant Wild: Exploring endangered animals & conservation

Help ZSL's scientists learn about and protect animals all around the world with our unique app Instant Wild:

www.instantwild.zsl.org

Explore images live-streamed from habitats all around the world and help the scientists studying the animals that live there by tagging what animals you spot!

Once you've had fun tagging, have a go at the following activities:

1. Draw lines below to match the words with what they mean:

Endangered

No more of the animal left in the wild

Extinct

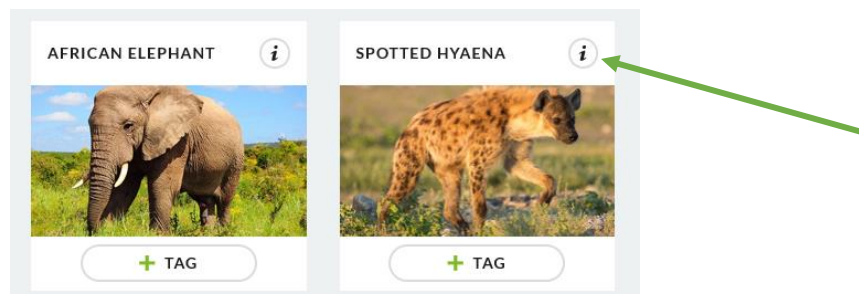

To protect wild animals and their habitats so they don't go extinct

Conservation

Not many of the animal left in the wild

2. Pick your favourite project on Instant Wild and start tagging!

3. For each animal you spot, click the *i* next to its picture to find out more about it.

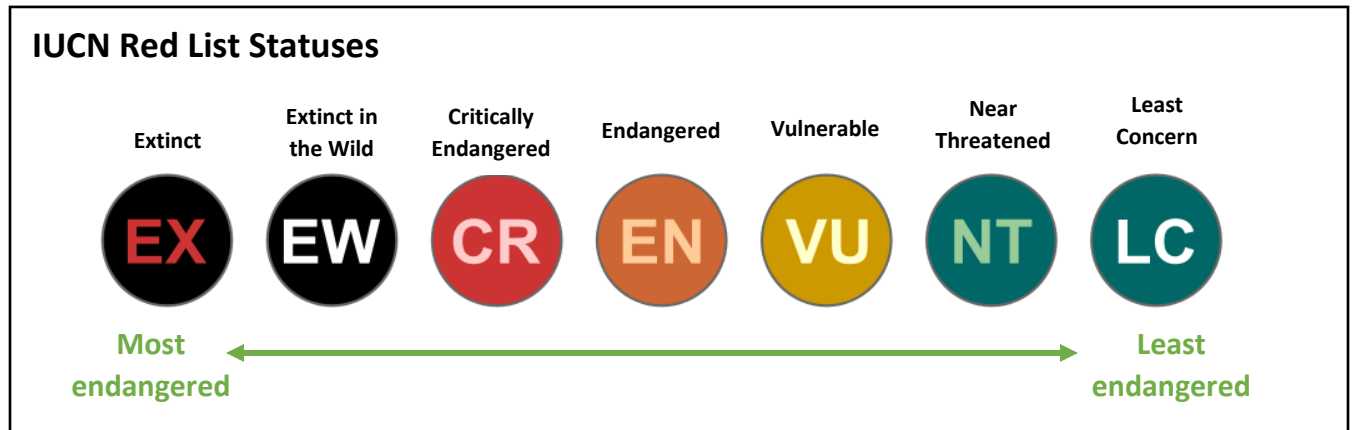

African Elephant

Loxodonta africana

Above the picture it tells you the 'IUCN Red List Status' of the species – this is how endangered it is.

The African elephant is the largest living terrestrial animal. Their upper lip and nose form a trunk, which acts as a fifth limb, a sound amplifier and an important method of touch.

4. Write down the three most endangered animal species you find below, and research what is causing them to be endangered:

Species	IUCN Red List Status	Main reason it's endangered

5. For each of the reasons above, write down one thing people could do to help these animals:

1.....

2.....

3.....

6. What could you do at home to help local wildlife? Write down some ideas below:
